

AI Visibility Audit

LLM Usage by Parameter

Which of the 62 checks are designed to use an LLM, and why

Current implementation status — read this first

0 of 62 checks make a live LLM API call today. This was verified directly against the backend source code (backend/app/parameters/*.py) — there is no OpenAI, Anthropic, or any other LLM client call anywhere in the engine. Every check currently runs as deterministic Python / HTTP / HTML-parsing logic. The table below instead reflects the parameter **registry's design specification** (backend/app/parameters/registry.json — the ai_required and check_logic fields) — which checks are specified to require a semantic/contextual judgment call (the kind of thing an LLM is suited for and a fixed rule can only approximate), and exactly what that judgment is — not what the current code executes.

Summary: **36** specified Yes · **6** specified Optional · **20** specified No (of 62 total)

Technical Parameters

22 checks - 35% of the Overall Score

ID	Parameter	LLM?	Reason
TECH-01	AI crawler permissions	No	Fully rule-based / deterministic (method: Regular automation + Python). No language-model judgment is used or specified for this check.
TECH-02	No CDN/firewall blocking AI crawlers	No	Fully rule-based / deterministic (method: Regular automation + Python). No language-model judgment is used or specified for this check.
TECH-03	llms.txt present, accurate and current	Optional	Requires judgment: GET /llms.txt; verify HTTP 200, non-empty text, readable sections, links to important public pages, and freshness metadata if available.
TECH-04	No login, pop-up or cookie wall covering main content	Optional	Requires judgment: Render page in headless browser; detect full-screen overlays, login forms, cookie walls and modal elements obscuring primary content; capture screenshot/DOM evidence.
TECH-05	Sitemap complete, accurate and submitted	No	Fully rule-based / deterministic (method: Regular automation + Python). No language-model judgment is used or specified for this check.
TECH-06	No broken links, redirect chains or error pages	No	Fully rule-based / deterministic (method: Regular automation + Python). No language-model judgment is used or specified for this check.
TECH-07	Page speed and Core Web Vitals (LCP, INP, CLS)	No	Fully rule-based / deterministic (method: Performance automation). No language-model judgment is used or specified for this check.
TECH-08	Mobile responsiveness and secure HTTPS delivery	No	Fully rule-based / deterministic (method: Regular automation + Python). No language-model judgment is used or specified for this check.
TECH-09	Main content present in page source, not JS-only	No	Fully rule-based / deterministic (method: HTML parsing + browser). No language-model judgment is used or specified for this check.
TECH-10	One H1 per page and logical H2/H3 hierarchy	No	Fully rule-based / deterministic (method: HTML parsing). No language-model judgment is used or specified for this check.
TECH-11	Heading frequency that lets an assistant lift a clean passage	Yes	Requires judgment: Measure words per heading, paragraph size, and whether sections form self-contained answer blocks; flag very long sections with no subheading.
TECH-12	Tables and lists as real markup rather than images	No	Fully rule-based / deterministic (method: HTML parsing). No language-model judgment is used or specified for this check.
TECH-13	Text-to-code ratio and content depth per page	No	Fully rule-based / deterministic (method: HTML parsing). No language-model judgment is used or specified for this check.
TECH-14	Image alt text and video transcripts	Optional	Requires judgment: Count images with meaningful alt; detect video embeds and transcript blocks; verify transcripts are indexable text when present.
TECH-15	Published and updated dates visible and in code	No	Fully rule-based / deterministic (method: HTML/schema parsing). No language-model judgment is used or specified for this check.

ID	Parameter	LLM?	Reason
TECH-16	Organization markup — logo, address, contact, profiles	No	Fully rule-based / deterministic (method: Schema validation). No language-model judgment is used or specified for this check.
TECH-17	Page-type markup — Article, FAQ, Service, Product, Person, HowTo	No	Fully rule-based / deterministic (method: Schema validation). No language-model judgment is used or specified for this check.
TECH-18	Author profiles marked up with real credentials	Optional	Requires judgment: Detect author byline and profile; extract name, role, credentials, profile URL; verify profile is reachable.
TECH-19	Markup validates cleanly and matches visible content	No	Fully rule-based / deterministic (method: Schema validation). No language-model judgment is used or specified for this check.
TECH-20	One clean URL per page; duplicates resolved	No	Fully rule-based / deterministic (method: HTTP + HTML parsing). No language-model judgment is used or specified for this check.
TECH-21	hreflang set correctly for every target country	No	Fully rule-based / deterministic (method: HTML parsing). No language-model judgment is used or specified for this check.
TECH-22	Page titles and meta descriptions present and unique	No	Fully rule-based / deterministic (method: HTML parsing). No language-model judgment is used or specified for this check.

On-Page Parameters

22 checks - 40% of the Overall Score

ID	Parameter	LLM?	Reason
ON-01	Headings phrased as buyer questions	Yes	Requires judgment: Classify each meaningful heading as buyer question / informational / navigation; focus on headings that can map to customer intents.
ON-02	Self-contained 40–60 word answer under each question	Yes	Requires judgment: For each question-style heading, capture the next answer block until next heading; evaluate whether it directly answers and is self-contained; measure word count.
ON-03	Clear definition sentences for every core concept	Yes	Requires judgment: Extract core service/technology concepts; detect explicit definitions; ask LLM to verify definition clarity and completeness.
ON-04	Conclusion first, supporting detail after	Yes	Requires judgment: Evaluate whether the page states the main answer/value proposition before supporting detail; avoid generic introductions.
ON-05	FAQ section on every service and solution page	No	Fully rule-based / deterministic (method: HTML + schema). No language-model judgment is used or specified for this check.
ON-06	FAQ schema validity and answer consistency	Yes	Requires judgment: Compare schema questions/answers against visible FAQ; validate JSON; flag missing, extra or materially inconsistent items.
ON-07	Comparison and specification tables where buyers evaluate	Yes	Requires judgment: Detect buyer-evaluation intents such as vs, alternatives, pricing, features, capabilities; check whether a real table exists and includes comparable attributes.
ON-08	Lists and numbered steps that support answer extraction	Optional	Requires judgment: Detect ordered/unordered lists; determine whether they represent procedures, benefits or evaluation criteria rather than decorative lists.
ON-09	Natural, conversational phrasing rather than keyword strings	Yes	Requires judgment: Calculate repeated term frequency and ask LLM to judge naturalness, readability and whether phrasing feels query-generated or stuffed.
ON-10	Keyword stuffing / unnatural repetition	No	Fully rule-based / deterministic (method: NLP). No language-model judgment is used or specified for this check.
ON-11	Content depth and completeness	Yes	Requires judgment: Compare page coverage against expected intent topics; identify missing subtopics, unanswered questions and unsupported claims.
ON-12	Original, citable data point on major pages	Yes	Requires judgment: Extract statistics; determine whether they appear original to the company and whether a citation/source context is supplied.
ON-13	Named author with role, credentials and real profile	Optional	Requires judgment: Extract author name, role, credentials and profile; verify link and profile consistency.
ON-14	Named clients, quantified outcomes, deployment detail	Yes	Requires judgment: Detect client references, numbers/results, deployment context, time frame and solution details; classify evidence strength.
ON-15	Claims sourced and dated to a primary source	Yes	Requires judgment: Extract factual claims and nearby citations; resolve linked sources; assess whether sources appear primary and dated/current.
ON-16	Reviewer or technical approver named where it matters	Yes	Requires judgment: Detect reviewer/reviewed-by signals and named technical approver; assess whether reviewer role is relevant to topic.
ON-17	Last substantive update within topic shelf life	Yes	Requires judgment: Extract modified dates; classify topic shelf life; optionally compare current claims against dates and version text.
ON-18	Buying-journey coverage across discovery to decision	Yes	Requires judgment: Classify pages into awareness, qualification, comparison, objection, trust and decision stages; find missing stages.
ON-19	Best X for Y and X vs Y pages per industry/market	Yes	Requires judgment: Detect comparison/best-for content patterns across target services, industries and markets; identify missing high-intent combinations.

ID	Parameter	LLM?	Reason
ON-20	No two pages competing for the same question (cannibalization)	Yes	Requires judgment: Generate question/intent representations for pages; compute pairwise similarity; ask LLM to confirm whether high-similarity pages compete.
ON-21	No thin or near-duplicate pages diluting the topic	No	Fully rule-based / deterministic (method: NLP + embeddings). No language-model judgment is used or specified for this check.
ON-22	Brand named alongside category, industry and geography	Yes	Requires judgment: Check co-occurrence of brand name with relevant category, industry/service and geography; LLM verifies semantic association rather than simple proximity.

Off-Page Parameters

18 checks - 25% of the Overall Score

ID	Parameter	LLM?	Reason
OFF-01	Wikidata entry present and accurate	Yes	Requires judgment: Search for organization entity; compare website, name, aliases and key facts; LLM resolves ambiguous entity matches.
OFF-02	Wikipedia or comparable reference source	Yes	Requires judgment: Search for authoritative reference pages about the company; evaluate whether page is genuinely about the organization and what is cited.
OFF-03	Google Knowledge Panel presence and consistency	Yes	Requires judgment: Search brand/entity; detect knowledge panel or structured entity result where programmatically observable; compare identity facts.
OFF-04	Company profiles complete and consistent across LinkedIn/Crunchbase/Bloomberg/ZoomInfo	Yes	Requires judgment: Retrieve profile fields; normalize company name, website, industry, HQ and descriptions; compare against canonical company facts.
OFF-05	Company name, address and details identical across sources	Yes	Requires judgment: Build canonical identity record from website; compare NAP and company attributes across sources; classify material vs cosmetic differences.
OFF-06	Certifications verifiable off-site (CMMI, ISO, partner tiers)	Yes	Requires judgment: Extract certification claims from site; search authoritative issuer records; verify company name, certificate type and current validity.
OFF-07	G2, Clutch, Gartner Peer Insights and TrustRadius completeness	Yes	Requires judgment: Find profiles; check claimed status signals where observable, category, company description, logo, services and recent activity.
OFF-08	Review volume, recency and velocity versus competitors	Yes	Requires judgment: Collect review counts and dates for company and competitor set; calculate rolling velocity and freshness.
OFF-09	Category placement matching how the company positions itself	Yes	Requires judgment: Collect categories assigned by external sources; compare with desired category taxonomy derived from website.
OFF-10	Reddit, Stack Overflow, Quora and industry forums presence	Yes	Requires judgment: Search for brand/service mentions and assess whether mentions are substantive, recent and relevant rather than spam.
OFF-11	YouTube presence and authority footprint	Yes	Requires judgment: Find official and third-party videos mentioning brand/services; assess channel ownership, topic relevance, transcript/indexability and recency.
OFF-12	Podcast, webinar and conference footprint indexed/transcribed	Yes	Requires judgment: Search for company/expert appearances; classify event authority, relevance and whether transcript text is indexable.
OFF-13	Quality and topical relevance of sites linking to the company	Yes	Requires judgment: Retrieve referring domains, link pages, anchor/context and domain metrics; classify topical relevance and quality.
OFF-14	Unlinked brand mentions and earned news by market	Yes	Requires judgment: Search for brand mentions; determine whether mention links to site; classify earned media vs directory vs noise; bucket by market.
OFF-15	Third-party sites actually cited by AI assistants for target topics	Yes	Requires judgment: Generate a fixed query set; collect cited domains/URLs from assistant responses where available; aggregate citation frequency by topic and market.
OFF-16	Presence on best/top/leading service lists	Yes	Requires judgment: Run target queries such as best/top/leading [service] for [industry]; extract list pages; determine whether company is included and accurately categorized.
OFF-17	Presence on alternatives-to-competitor pages	Yes	Requires judgment: Build competitor set; run alternative-intent searches; identify pages and check whether company appears as an alternative with accurate description.

ID	Parameter	LLM?	Reason
OFF-18	Analyst, directory and trade-press coverage + description accuracy	Yes	Requires judgment: Collect mentions; classify source authority; compare descriptions with canonical company positioning and detect inaccurate claims.

Generated from backend/app/parameters/registry.json (ai_required, method and check_logic fields). If this registry changes, regenerate this document so it stays accurate. See Parameter-Calculation-Methodology-EqualWeight.docx in this same folder for the full scoring methodology.
